

Brock PowerBase

There is no equal.

Our growing list of happy clients all have some things in common.

Greatest Safety on the Market

The relative risk of common head injury can be reduced by 50% or more, especially as the field ages, when built over Brock instead of over stone. Medical Research has proven the importance of reducing concussions, especially in young athletes. Athletic Fields built with Brock consistently outperform fields built over stone, by lowering the G-max, and keeping it there, for the life of the turf.

Ideal Field Stiffness

Whether it's Soccer, Baseball, Football, or Rugby, Brock fields meet the highest performance standards in the world, which is important regardless of the age of the athlete. Like the Oregon Ducks Stadium – a G-Max <100 – yet firm and responsive to handle their legendary speed. *A low G-Max does NOT mean a soft field.*

25 Years of Peace of Mind

Our proven safety record, combined with our 25-year warranty, means you can spend your time worrying about something other than your field.

On-Site Quality Assurance

Brock is the ONLY company that provides personnel and on-site assistance during construction – at no charge to the owner – to ensure proper base and drainage preparation, as well as turf installation. Our support for your project extends beyond just getting the product to the jobsite.

Environmental Stewardship

Brock PowerBase is the ONLY product on the market that has achieved a Cradle to Cradle Certification from MDBC, the highest environmental standard in the industry for sustainability. Our product will never see a landfill, and the owner will never have to pay the rising costs to dispose of it. So we can all be earth friendly.

Product Consistency

Our homogeneous material (not ground up waste) and molding technology allow us to produce a product that is unmatched in the industry. The same material, the same thickness, the same easy installation, the same predictable product, performance and drainage results everytime. Guaranteed.

Best Value

Using Brock PowerBase instead of stone saves money because Brock allows you to design a field that optimizes the playability and drainage using less materials. And the savings continue when you replace your field, reducing base repair costs and allowing shorter turf to be used, even while getting more years out of your field. You **can** get more for less.

Create American Jobs

Quite simply, we believe that U.S. tax dollars should be spent on U.S. made products that create U.S. jobs. We are proud to be 100% made in the USA.
